

LEONARDO NICOLAI

Software Engineer — Fullstack, React, Node | Typescript | Golang

+55 (46) 99942-3353 ♦ nicolaileo@outlook.com ♦ [LinkedIn](#) ♦ [Portfolio](#) ♦ Florianópolis, Brazil

SUMMARY

Software Engineer with 7+ years of experience building scalable fullstack products across the entire stack — from React frontends to Node.js/Express APIs and Prisma-backed databases. As Technical Lead, leads a team of 6 developers and QAs on a shareholder-management platform handling datasets of up to 500K shareholders, owning discovery, estimates, and delivery. Experienced integrating AI-powered features (translation, transcription, and content summarization) into production products. Seeking a role building performant, scalable web applications where architecture and product impact matter.

ACHIEVEMENTS

- **50% Smaller Production Bundle:** Cut a Vite application's bundle size in half by auditing and removing barrel-file re-exports, improving load performance across the product.
- **70% Faster Complex Assembly Registration:** Built an **AI-powered** feature that auto-generates shareholder assemblies from PDF documents, cutting registration time by up to 70% for complex assemblies.
- **3 Years Leading a High-Performance Team:** Led a team of 6 developers and QAs for 3 years as Technical Lead, driving discovery, estimates, and delivery in a fast-paced, high-performance environment.

EXPERIENCE

AtlasGovernance

Technical Lead

Remote, Brazil

June 2022 – Present

- Lead a team of 6 developers and QAs, running discovery sessions, technical estimates, and sprint planning for a shareholder-management platform.
- Cut Vite application bundle size by 50% by auditing and removing barrel-file re-exports, improving load performance.
- Built a PDF-to-assembly generation feature, cutting registration time by up to 70% for complex shareholder assemblies.
- Delivered 3 AI-powered integrations (translation, transcription, and resume/content summarization) into the core product.

Porter Group

Software Engineer

Florianópolis, Brazil

November 2020 – June 2022

- Maintained a real-time WebSocket integration for a home security system used by 100+ concurrent call-center agents handling high-frequency updates per minute.
- Helped define new feature architecture and design.
- Built a new UI components library adopted across the project, standardizing design and improving performance.

FluxBeer

Software Engineer

Dois Vizinhos, Brazil

August 2020 – November 2020

- Designed and implemented intuitive dashboards for machine monitoring and control.
- Integrated real-time data visualization and interaction features.
- Optimized UI components for performance and scalability.

Sanar

Software Engineer

Remote, Brazil

April 2020 – August 2020

- Defined and set up the initial tech stack for the project.
- Developed and integrated CRUD operations with GraphQL APIs.
- Enabled seamless handling of media uploads and management.

Sponte

Software Engineer

Dois Vizinhos, Brazil

February 2019 – April 2020

- Contributed to a component library standardizing the UI.
- Developed and integrated features with backend APIs.
- Ensured code quality through integration testing.

Codengage

Intern

Dois Vizinhos, Brazil

October 2018 – February 2019

- Helped build and standardize a PWA UI.
- Added a new GraphQL integration to an API.
- Wrote unit and integration tests.

SKILLS

Frontend React.js, JavaScript, TypeScript, CSS, SASS, Bootstrap, HTML5, Responsive Web Design

Backend & APIs Node.js, Express.js, Prisma, GraphQL, Apollo GraphQL, REST APIs, Go

Tools & Practices Git, GitHub, Vite, Zustand, Copilot, Cypress, Cucumber, Scrum, Agile Methodologies, Linux

LANGUAGES

Portuguese Native proficiency

English Fluent

Spanish Basic

PROJECTS

Ultrasound Report Reader: Personal project that parses ultrasound exam files and generates a summarized report of key clinical information.

Personal Finance App (Flutter): Personal project for tracking personal income, expenses, and budgets, built with Flutter.

EDUCATION

UTFPR, Dois Vizinhos

Brazil

Bachelor

Participated in a Junior Company Project as part of the course curriculum, contributing to real-world software development, project management, and team collaboration.
